## What Is Adderall and How Does It Work?

**Adderall** is a prescription medication containing **amphetamine and dextroamphetamine**, used primarily to treat ADHD and Narcolepsy. It works by increasing certain neurotransmitters in the brain to improve focus, attention, and impulse control.

Adderall comes in two main forms:

- **Immediate Release (IR):** Quick-acting for short-term focus needs.
- **Extended Release (XR):** Provides long-lasting effects throughout the day.

At **MedsFedEx.com**, both IR and XR forms are available for **overnight delivery**, allowing you to choose the formulation that fits your prescribed treatment plan.
