Medical Uses

Alprazolam is primarily used for:

- **Generalized Anxiety Disorder (GAD):** Reduces persistent worry, tension, and nervousness.
- **Panic Disorder:** Controls sudden attacks of fear, palpitations, and shortness of breath.
- **Short-term Insomnia or Stress-related Sleep Issues:** Helps improve sleep when anxiety prevents rest.

By enhancing the effects of GABA neurotransmitters in the brain, Alprazolam produces a calming effect that restores balance, improves focus, and reduces excessive worry. Under clinical supervision, it can significantly improve daily functioning and overall quality of life.
