What Is Oxycodone?

Oxycodone is a strong opioid pain reliever used to treat **moderate to severe pain**. It works by altering how the brain and nervous system respond to pain, offering effective relief for chronic, post-surgical, or injury-related pain.

Common Forms:

- **Oxycodone Immediate Release (IR):** Fast-acting formula for quick relief.

- **Oxycodone Extended Release (ER):** Long-lasting pain control up to 12 hours.
-
