What is Phentermine?

Phentermine is a prescription-based weight-loss medication that acts as an **appetite suppressant**. It affects the central nervous system, helping reduce hunger and improve focus on diet management.

It's typically prescribed for individuals dealing with:

- Obesity or overweight conditions
- Weight-related issues such as high cholesterol or diabetes
- Difficulty managing diet and appetite through lifestyle alone

Phentermine is often recommended as part of a complete plan that includes diet control, exercise, and behavioral changes.
